

Full 19-recipe Q-sensitivity — only V20/V2/V8 are monotonic ↑ on both axes

Three recipes climb monotonically on F-2 and F-7 across $Q=8/16/32$: V20 (purple ★, label-aware), V2 (cyan, intensity-bin), V8 (green, NFINDR endmember). V6 (dashed cyan) climbs on F-7 only — F-2 regresses. V20 has the steepest gains and highest absolute values on both axes. Eight recipes decline monotonically; six peak at $Q=16$ then regress.
